PROFILE

Full-stack .NET developer specializing in ASP.NET Core development , Clean Architecture, and background-job processing for enterprise-scale systems supporting 15,000+ users. Experienced in full-cycle delivery from requirement analysis through production support, API design, EF Core, and multi-system integrations across correspondence management, HR, and financial platforms.

SKILLS

Programming: C#, HTML, CSS, JavaScript, OOP, Data Structures, Algorithms, SOLID Principles, Design Patterns, Clean Code

Frameworks & Libraries: ASP.NET Core (MVC, API, Minimal APIs), Razor Pages, DTOs, AutoMapper, LINQ, Entity Framework Core, Clean Architecture, N-Tier Architecture, Repository Pattern, Unit of Work, Dependency Injection, MVVM, Hangfire (Background Jobs), QuestPDF, Aspose, Syncfusion

Databases & Security: Microsoft SQL Server, Microsoft Identity, JWT

Tools: Git, GitHub, Swagger, DataTables

WORK EXPERIENCE

Full Stack .NET Developer — SquareOne Technologies *(Remote, Full-Time)* **06/2025 – Present**

- Contribute to end-to-end development (backend + frontend) of ICTS platform modules as part of a 2–4 person team, working across three interconnected applications — ICTS, ICTS-Circular, and CommGate — serving 15,000+ users.
- Refactoring efforts across core controllers (e.g. CorrespondencePhase, HomeController) — extracting reusable async helpers and consolidating duplicated logic to align with SOLID principles and reduce long-term maintenance overhead.
- Migrated legacy Windows Services to a Hangfire-based background job architecture end-to-end, including a custom Recurring Job Manager for automatic job registration; also built the ManageTracking modal feature from scratch, collaborating through code review to ship incremental, low-risk changes to a large shared codebase.
- Participate in the full delivery cycle from requirement analysis and UAT through production deployment, monitoring, and root-cause troubleshooting of production issues spanning code, database, APIs, and server configuration.

Teaching Assistant — Data Structures — AAST Sheraton Branch *(Part-Time)* **02/2026 – 06/2026**

- Assisted in teaching a Data Structures course for one term, supporting lab sessions, student Q&A, and coursework review for undergraduate CS students.

Full Stack .NET Developer — Optimum Solution *(On-Site, Full-Time)* **12/2024 – 06/2025**

- Owned major components of two full-cycle builds — an International Arbitration financial management app (multi-currency, multi-role permissions, automated recurring transactions) and an enterprise HR Management System (N-Tier architecture, biometric attendance integration) — both delivered ahead of schedule as part of a project team.
- Engineered core technical pieces independently: Hangfire-driven recurring transaction automation, QuestPDF-based statement generation, and stored-procedure-backed performance optimization for the Arbitration app.
- Built relational data models and permission-based access control (Microsoft Identity) for HR modules spanning Employees, Departments, Positions, and Pay Codes.

Full Stack .NET Developer Intern — EVA Pharma *(On-Site, Internship)* **08/2023 – 09/2023**

- Contributed to a real feature module during the internship, working across the stack from frontend data capture through to database storage — building early hands-on experience analyzing and validating data as it moved from UI input to persistence layer.

EDUCATION

Bachelor of Computer Science and Artificial Intelligence — Helwan University, Cairo

Major: Computer Science | Minor: Information Systems | 09/2019 – 06/2023

KEY PROJECTS

ICTS (Integrated Correspondence Tracking System)

Core enterprise platform for managing official correspondences, users, and organizational workflows across 15,000+ users.

- Integrates with multiple internal/external systems (CommGate, Circular, PCU, etc.) via scheduled Hangfire synchronization (minute/hour/day cycles).
- Optimized email dispatching through batched and delayed processing to reduce real-time load.

ICTS Circular

- Announcement and communication system integrated with ICTS for publishing circulars (delegations, obituaries, announcements, etc.).
- Background jobs handle scheduled publishing, user sync, and delayed email notifications to avoid unnecessary real-time processing.

ICTS CommGate

- Communication and integration gateway between ICTS and external users, handling API-based and internal background integrations.
- Synchronizes correspondences and users via Hangfire recurring/scheduled jobs and Windows services, with logging and validation for reliable data exchange.

Live at: https://pwacts.ashghal.gov.qa/

HR Management System **2025**

- Enterprise-grade HR system built on N-Tier Architecture and .NET 8, with permission-based authentication via Microsoft Identity.
- Built core modules: Employees, Departments, Positions, Vacation Policies, and Pay Codes with strong relational modeling.
- Integrated biometric fingerprint attendance tracking, plus manual and Excel-based imports for remote/hybrid workers.
- Designed flexible employee profiles and configurable vacation/holiday rules to automate absence calculations.

Technologies: .NET 8, ASP.NET Core MVC, EF Core, Microsoft Identity, SQL Server, N-Tier Architecture

International Arbitration Web App **12/2024**

- Independently designed, developed, and deployed an end-to-end financial management app handling clients, partners, matters, transactions, multi-level lawyer roles, timesheets, and multi-currency statements.
- Automated recurring transactions (monthly/quarterly/biannual/yearly) via Hangfire; implemented permission-based authorization with Microsoft Identity.
- Generated professional PDF statements with QuestPDF and built analytics pages with DataTables for filtering/sorting.
- Optimized database performance using stored procedures; maintained clean architecture via Repository Pattern and Unit of Work.

Technologies: ASP.NET Core MVC, MSSQL, Hangfire, QuestPDF, Microsoft Identity, Bootstrap

Cashier System **03/2025**

- Built a cashier system for MN Lighting to manage customers, products, and invoices, with role-based access for admins and users.
- Enabled invoice generation and printing for smooth transaction processing.

Technologies: ASP.NET Core MVC, Entity Framework Core, Microsoft Identity, QuestPDF, MSSQL

Book Management System (API) **08/2024**

- RESTful API for managing books, authors, and categories using N-Tier architecture, with pagination and category/author lookup endpoints.
- Secured with Microsoft Identity and JWT, including role-based login/registration.

Technologies: ASP.NET Core Web API, EF Core, Microsoft Identity, JWT, MSSQL, Swagger

Additional Projects

- QR Code Generator API (08/2023) — .NET Core API + Angular app generating QR codes with scan analytics (location, browser type, etc.).
- Movie Database Web App (02/2023) — ASP.NET Core MVC app with admin-approved submissions and role-based access, similar to IMDb.
